

Sales Analytics Dashboard Using Microsoft Excel

Project Overview

The objective of this project was to develop an interactive Sales Analytics Dashboard using Microsoft Excel and the Sample Superstore dataset. The project focused on transforming raw sales data into meaningful business insights through data cleaning, preprocessing, analysis, and visualization techniques.

Dataset

The Sample Superstore dataset contains information related to customer orders, sales transactions, profits, product categories, regions, and shipping details.

Data Cleaning and Preprocessing

Created Month, Year, Quarter, and Profit Margin Percentage fields, verified data consistency, and prepared the dataset for Pivot Table and dashboard analysis.

Data Analysis

Performed Regional Sales and Profit Analysis, Monthly Sales Trend Analysis, Customer Analysis, Product Category Analysis, and Overall Business Performance Analysis.

Dashboard Components

KPIs: Total Sales, Total Profit, Total Orders, Total Quantity Sold. Visualizations: Regional Performance, Monthly Trends, Category Analysis, Customer Analysis, and Interactive Slicers.

Key Insights

A small group of customers contributed significantly to total sales and profit. Certain product categories generated higher profitability. Regional and monthly trends revealed important business performance patterns.

Tools and Technologies

Microsoft Excel, Pivot Tables, Data Cleaning, Data Preprocessing, Data Visualization, Dashboard Design, and Business Analytics.

Conclusion

This project demonstrates the use of Microsoft Excel as a business intelligence tool for analyzing sales data and creating interactive dashboards that support data-driven decisions.
